## Providing Services

Penta-Ocean Construction Co., Ltd. celebrated its 125th anniversary in April 2021 since its founding as Mizuno Gumi in Kure City, Hiroshima Prefecture in 1896. Our initial business in marine civil engineering works have significantly expanded to land civil engineering and building construction works.

In 1961, the company made a breakthrough in an international bid by winning the Suez Canal Dredging Contract in Egypt. It paved the way for the company to be recognized as one of the leading international port and marine contractors.

Under our ESG-oriented management philosophy of “affiliating with society,” “creating a nature-rich environment,” and “cherishing a pioneering spirit,” we aim to become a “genuine global general contractor” with distinctive strengths in port, coastal, and waterfront areas, as well as overseas.

A “genuine global general contractor” is a company, free from barriers between civil engineering and building construction businesses as well as between domestic and overseas businesses, and is an “advanced company in Diversity and Inclusion” where diverse human resources, regardless of nationality or gender, can work together with vigour and enthusiasm as well as mutual respect.

In Africa, we have been engaging in the construction and renovation of commercial and fishing port under grant aid by the Japanese Government. Recently, we’ve successfully completed the Nacala Port urgent rehabilitation in Mozambique with high quality control and safety management of the Japanese standard. Currently we are constructing Nacala port development – Project in Mozambique and, Toamasina Port Project in Madagascar.

We strongly believe that development of sustainable infrastructures in African countries will gain stable economic growth and will further improve technological capability of local people through transfer of advanced technologies of Japan.

State-of-the-art dredger, “CASSIOPEIA V”
