## Providing Services

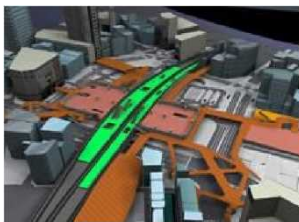

Oriental Consultants Co., Ltd. provides consulting services in a wide range of engineering fields, and has been in business for more than 50 years, since 1957. We provide technologies and services for infrastructure construction in the phases of surveying, planning, design, maintenance, and management and operations. In Japan, we are a leading technology provider, particularly in the fields of bridges, roads, and transport. Moreover, we have been working to expand our business domains by initiating self-financed projects in the fields of photovoltaic power generation, tourism mobility, and the "sixth industrialization" of agriculture, among others.

We are also involved overseas projects, including infrastructure construction, providing engineering and planning services for infrastructure development projects, and providing support for overseas expansion of domestic companies, through collaboration with Oriental Consultants Global Co., Ltd., a group company.

## Project Achievement/Technical Expertise

Ever since we were founded in December 1957, Oriental Consultants has been providing knowledge services geared towards advancing and diversifying social needs and operating a global consulting business in a broad range of markets.
